

- A – Seat/Mating Ring
- B – Face/Primary Ring
- C – Metal Bellows Seal Head
- D – Sleeve
- E – Gland

### Product Description

The 5600 Series is a modular cartridge seal family that includes interchangeable elastomer bellows, metal bellows, and elastomer O-ring pusher seal designs.

- The Type 5625 and 5625P dual seal arrangements incorporate a edge welded metal bellows seal head.
- Primary and mating ring reverse balance designs allow for ID or OD pressurization, which permits the dual seal to operate as a tandem or double. Positive seal face closing forces are maintained in an upset pressure reversal situation.
- OD pressurization of the outboard seal avoids subjecting components to high tensile stresses and achieves improved cooling. For vertical installations, it allows venting of entrapped air.

### Design Features

- Reversible seal heads
- Tangential inlet and outlet pipe connections
- ANSI B73.1M and DIN 24960 pump-compliant
- Optimized pressure balanced design
- Set screw-less outboard seal drive
- Chemical-resistant metal bellows secondary seal

### Performance Capabilities

- Temperature: -29°C to 204°C/-20°F to 400°F
- Pressure: 21 bar g/300 psig
- Speed: up to 25 m/s/5000 fpm
- End Play/Axial Float Allowance: 0.13mm/0.005"
- Runout/Out of Squareness: 0.05mm/0.002"

# TYPE 5625/5625P

## DUAL METAL BELLOWS SEALS

### Pressure Rating Limits

1. When Carbon face is used, temperature limit is 200°C/393°F.
2. For Silicon Carbide vs. Tungsten Carbide temperature limits, consult John Crane.

### Multiplier Factors

	Selection Considerations	Multiplier Factor
<b>Sealed Fluid Lubricity</b>	Petrol/Gasoline, Kerosene, or Better	x 1.00
	Water and Aqueous Solutions	x 0.75
	Light Hydrocarbons (Specific Gravity <0.65, etc.)	x 0.60
<b>Sealed Fluid Temperature</b>	Up to 80°C/175°F	x 1.00
	Above 80°C to 120°C/175°F to 250°F	x 0.90
	Above 120°C to 180°C/250°F to 355°F	x 0.80
	Above 180°C to 230°C/355°F to 445°F	x 0.65

#### Example for Determining Pressure Rating Limits:

Seal: 50.8mm/2" diameter Type 5625  
 Operating mode: pressurized dual  
 Barrier fluid: aqueous solution  
 Face materials: silicon carbide vs. silicon carbide  
 Operating temperature: 80°C/175°F  
 Operating speed: 2950 rpm

Using the pressure rating limits graph, the maximum pressure would be 21 bar g/300 psig.

From the multiplier factors chart, apply the multipliers for the specific service requirements to determine the maximum operating pressure for the application:

$$21 \text{ bar g}/300 \text{ psig} \times 0.75 \times 0.90 = 14 \text{ bar g}/203 \text{ psig}$$

The maximum operating pressure of this 50.8mm/2" Type 5625 seal is 14 bar g/203 psig.

# TYPE 5625/5625P

## DUAL METAL BELLOWS SEALS

### Maximum Pressure Limits

Tandem Type 5625*	Double Type 5625*	
	Barrier Fluid Pressure**	Inboard Seal Internal Pressure Rating***
Process Pressure 21 bar g/ 300 psig	21 bar g/ 300 psig	2-4 bar g/20-50 psig (Norm.) 10 bar g/150 psig (Max. Operating) 21 bar g/300 psig (Max. Static)

\* Barrier fluid pressure relative to seal chamber pressure (API Plan 52 or 53) determines usage of the cartridge. As a tandem, the buffer pressure is lower than process pressure; or as a double, the barrier pressure is higher than process fluid pressure to be sealed.

\*\* John Crane recommends barrier fluids having a viscosity less than 14cSt/65 SSU and fluid lubricity that is equal to or better than water at 38°C/100°F.

\*\*\* Inboard seal (Process side) internal pressure rating is defined as the barrier fluid pressure minus the seal chamber throat pressure.

### Materials of Construction

SEAL COMPONENTS	MATERIALS	
	Standard	Options
Description		
Face/Primary Ring	Resin-Impregnated Carbon	Silicon Carbide Nickel Binder Tungsten Carbide
Seat/Mating Ring	Silicon Carbide	Nickel Binder Tungsten Carbide
Sleeve Gland Collar Gland Adapter Sleeve Adapter	316 Stainless Steel	Alloy 20CB3 SS Alloy C-276 (UNS N10276)
O-ring	Fluoroelastomer Ethylene Propylene	Perfluoroelastomer Buna-N
Bellows	Alloy 20CB3 SS	Alloy C-276 (UNS N10276)

## DUAL METAL BELLOWS SEALS

### Application Criteria

The Type 5625 and 5625P cartridge seals can be customized for specific installations after review and evaluation by John Crane. The following data is needed to evaluate the proposed service.

- Make and Model of Equipment
- Shaft or sleeve OD
- Direction of shaft rotation viewed from drive end
- Seal cavity dimensions
- Buffer/barrier fluid
- Process Fluid
  - Specific gravity
  - Box pressure
  - Vapor pressure
  - emperature
  - viscosity
- Speed
